SUMMARY

B2B SaaS engineer who builds the unglamorous middle of enterprise products — multi-tenant RBAC, white-labeling, tiered plans, per-tenant quotas, admin consoles, data migration, and compliance-grade reporting — on top of impressive user-facing AI. Shipped a white-labeled SAP Business One copilot SaaS with 3 admin tiers, a GST compliance suite for CAs, and an enterprise fleet product.

TECHNICAL SKILLS

- SaaS Architecture: multi-tenancy (tenant-scoped RBAC, per-tenant quotas & feature flags) · white-label theming · tiered plans (Pilot/Read-Only/Read-Write/Migration) · partner/reseller models · admin consoles
- Enterprise: SAP Business One (HANA, OData Service Layer) · data migration & fuzzy field mapping · audit trails · read-only technical users · guarded SQL
- Compliance & Reporting: GST (CGST/SGST/IGST, HSN codes) · GSTR-1/3B exports · P&L/balance sheet · signed PDFs
- Product: Next.js/React · FastAPI · Supabase (RLS, cron) · Razorpay/Stripe (B2B billing, security deposits) · Docker · Vercel/Render
- Languages: TypeScript · Python · Go · SQL

EXPERIENCE

Cinntra Infotech — Systems Engineer · 2026 – Present

- Built CIRA, a RAG agent translating natural-language requests into audited SAP HANA queries and write operations, giving non-technical users direct access to enterprise data
- Built the point-of-sale system backend: transaction recording, merchant reconciliation, and offline synchronization

Niswa Engineering — Technical Consultant & Automation Engineer · 2024 – 2026

- Built asynchronous AI agents (TypeScript) that automated 80%+ of a content generation and scheduling pipeline
- Built the company website in Astro (95+ Google Lighthouse score); set up cloud infrastructure, API integrations, and event-driven automation workflows

Sudarshana Foundation — Full-Stack & Automation Engineer · Contract

- Designed and built the organization's first centralized web platform, digitizing paper-based workflows into software
- Built database systems handling 5,000+ monthly transactions

PROJECTS

B1 Copilot — White-Label Multi-Tenant SAP Copilot SaaS

- Upgraded an AI analytics copilot into a tiered B2B SaaS: Super Admin provisions Reseller Partners (plans: Pilot, Read Only, Read/Write Full, Migration), sets tenant quotas, and manages white-label brand names; Partner Admins connect and manage their clients' SAP B1 databases with per-tenant write_enabled toggles; End Users get the chat copilot.
- Built the partner data-migration tool: Excel/CSV upload → difflib fuzzy header mapping (irregular client headers like "Vendor Name" → strict SAP fields like CardName) → validation against the B1 Service Layer → batch push — the boring step that makes enterprise onboarding possible.
- Safety architecture for enterprise data: read-only technical HANA user, SELECT-only guarded SQL with parameter binding and row caps, per-employee session scoping, tampered/expired token rejection; 40+ unit tests + 60-question E2E accuracy harness with CI scorecard.
- Tech: FastAPI, Next.js 16, SAP HANA, OData, Docker — github.com/Aryan-Protein-Vala/Cira-RAG-agent

GSTGenius — Compliance SaaS for Indian Businesses & CAs (live)

- Built the CA-facing product: a dedicated portal where one Chartered Accountant manages unlimited clients with shared access, while each client self-serves invoicing, inventory, and compliance reports.
- Shipped the compliance surface: GST-compliant invoicing (CGST/SGST/IGST from HSN + location), one-click GSTR-1 / GSTR-3B exports, real-time P&L and balance sheets, recurring billing with automated dunning, and gateway auto-reconciliation; live at gstgenius-6f0d0.web.app.
- Tech: Next.js 15, Firebase, Razorpay — github.com/Aryan-Protein-Vala/GSTGenius

Black Index — Founder-Side B2B Marketplace Platform

- Built the SaaS vendor side of a distribution marketplace: product listings with hybrid commission config (upfront % + recurring % + max months), payment/webhook integration setup per provider, featured-listing payments, security deposits, and a founder dashboard with analytics, wallet, and product management.
- Tech: Next.js, Supabase, Razorpay/Stripe — github.com/Aryan-Protein-Vala/Black-Index

Prometheus — Enterprise Fleet Security Product (live)

- Built a B2B-distributable OS cleaner: 100% offline Rust TUI (zero telemetry as the selling point), HWID-bound license keys to prevent license burnout, a centralized Enterprise Fleet Command Center for organizational management, and a one-line curl installer across macOS/Linux — live at prometheus-cleaner.vercel.app.
- Tech: Rust, TUI, Next.js, GitHub Actions — github.com/Aryan-Protein-Vala/Prometheus

CERTIFICATIONS

- Frontend Development Certification — Sheryians Coding School
- Data Science & AI/ML Bootcamp Certification — Udemy
