SUMMARY

Two-sided platform engineer: built the matching, attribution, trust, and settlement layers for a SaaS affiliate marketplace (founders ↔ sellers), a verified social-activity marketplace with trust scores, and a skincare marketplace where an AI RAG engine is the matching engine over 1,300+ products. Deep in referral attribution, anti-fraud rails, escrow, and liquidity-side UX.

TECHNICAL SKILLS

- Marketplace Mechanics: two-sided matching · referral-link attribution & tracking · commission models (upfront + recurring) · escrow & settlement · payouts · demand/supply dashboards
- Trust & Safety: ID + trust-score verification · self-referral detection · velocity/fraud checks · content moderation · dispute workflows with SLAs
- Payments: Razorpay/RazorpayX/UPI · Stripe · PayPal · 14-provider webhook ingestion · idempotent settlement
- Product: Next.js (App Router, Server Actions) · Supabase (Postgres, RLS, realtime) · Tailwind · Framer Motion · Vercel Edge (ap-south-1)
- Languages: TypeScript · Python · SQL · Rust (engine work)

EXPERIENCE

Cinntra Infotech — Systems Engineer · 2026 – Present

- Built CIRA, a RAG agent translating natural-language requests into audited SAP HANA queries and write operations, giving non-technical users direct access to enterprise data
- Built the point-of-sale system backend: transaction recording, merchant reconciliation, and offline synchronization

Niswa Engineering — Technical Consultant & Automation Engineer · 2024 – 2026

- Built asynchronous AI agents (TypeScript) that automated 80%+ of a content generation and scheduling pipeline
- Built the company website in Astro (95+ Google Lighthouse score); set up cloud infrastructure, API integrations, and event-driven automation workflows

Sudarshana Foundation — Full-Stack & Automation Engineer · Contract

- Designed and built the organization's first centralized web platform, digitizing paper-based workflows into software
- Built database systems handling 5,000+ monthly transactions

PROJECTS

Black Index — Affiliate Marketplace for Indian SaaS (31k+ LOC)

- Designed the full two-sided flow: founders list products with hybrid commission config (upfront % + recurring % + max recurring months); sellers ("Warlords") browse the marketplace, generate product-specific tracked referral links, and earn on webhook-verified conversions.
- Built the attribution + settlement engine: referral endpoints associating traffic with seller+product, HMAC-verified provider webhooks from 14 payment providers feeding an atomic record_conversion RPC (customer upsert, recurring count, idempotent insert, founder debit, seller escrow credit, platform fee), and a 30-day escrow hold → withdrawable → RazorpayX/UPI payout pipeline.
- Built the trust layer: self-referral detection, velocity limits, fraud-report API with dispute evidence upload, blacklist admin tooling, and a dispute SLA cron; seller dashboards for links, transactions, earnings, and pending/withdrawable balances.
- Tech: Next.js, Supabase (RLS), Razorpay/Stripe, Zod — github.com/Aryan-Protein-Vala/Black-Index

PlusOne — Verified Social-Activity Marketplace (live)

- Built the marketplace loop for real-life activities: post a plan with an optional reward, or host an offer at your own ■/hour rate; instant real-time chat opens on booking confirmation; city + category discovery (Mumbai, Delhi, Bangalore; coffee, movies, study, gaming, travel).
- Designed the trust system: ID verification + trust-score badges, automated prohibited-content moderation, and public-venue-only safety policies — the difference between a demo and something people meet up on.
- Deployed edge-serverless in ap-south-1 (Mumbai) for India-first latency; live at findyour-plusone.vercel.app.
- Tech: Next.js 15, Supabase (Auth SSR, RLS), Tailwind v4 — github.com/Aryan-Protein-Vala/PlusOne

DermaOS — AI-Matched Product Marketplace (live)

- Built the matching engine for a consumer goods marketplace: an RAG recommendation layer ranking 1,300+ products by skin type, concern, and ingredient compatibility, with personalized grades per product card, marketplace filters, and a 4-week outcome forecast that de-risks first purchase.
- Built the monetization loop: freemium scan credits, Razorpay subscriptions, INR/USD regional availability — live at dermaos.vercel.app.
- Tech: Next.js 16, Supabase, Prisma, OpenRouter, Razorpay — github.com/Aryan-Protein-Vala/DermaOS

GSTGenius — CA-Client Marketplace of Services (live)

- Built the CA portal: one Chartered Accountant onboards and manages unlimited client businesses with shared access and per-client workspaces — a service marketplace where the CA is the seller and compliance automation is the product.
- Tech: Next.js 15, Firebase, Razorpay — github.com/Aryan-Protein-Vala/GSTGenius

CERTIFICATIONS

- Frontend Development Certification — Sheryians Coding School
- Data Science & AI/ML Bootcamp Certification — Udemy
