SUMMARY

AI product engineer who ships consumer AI products end to end — 6 AI-powered products with payments, freemium loops, and measurable UX: an AI skin-analysis marketplace (1,300+ products, live), a desktop AI that operates your OS, a voice AI answering in 0.8 ms P50, an AI resume rater, and creator-intelligence tools. I own the full arc: model pipeline → UX → monetization → trust.

TECHNICAL SKILLS

- AI Product: multimodal vision products (photo-in → report-out) · voice UX (STT/TTS, barge-in, partial transcripts) · streaming answers (progressive table/chart rendering) · guardrail UX (what users see when the model is fenced) · trust surfaces (verification badges, citations, SIMULATED labels)
- Monetization: freemium + scan-credit models · Razorpay (subscriptions, one-time) · BYOK vs managed-key tiers (\$14.99/\$49.99) · prepaid credit wallets · regional pricing (INR/USD)
- Product Craft: 95+ Lighthouse · mobile-first UI · onboarding flows · viral loops (edge OG share cards) · Chrome extension distribution · PDF reports as deliverables
- Stack: Next.js 14–16 · React 19 · TypeScript · FastAPI · Supabase/Firebase · OpenRouter/GPT-4o/Claude/Groq · Tauri (Rust)

EXPERIENCE

Cinntra Infotech — Systems Engineer · 2026 – Present

- Built CIRA, a RAG agent translating natural-language requests into audited SAP HANA queries and write operations, giving non-technical users direct access to enterprise data
- Built the point-of-sale system backend: transaction recording, merchant reconciliation, and offline synchronization

Niswa Engineering — Technical Consultant & Automation Engineer · 2024 – 2026

- Built asynchronous AI agents (TypeScript) that automated 80%+ of a content generation and scheduling pipeline
- Built the company website in Astro (95+ Google Lighthouse score); set up cloud infrastructure, API integrations, and event-driven automation workflows

Sudarshana Foundation — Full-Stack & Automation Engineer · Contract

- Designed and built the organization's first centralized web platform, digitizing paper-based workflows into software
- Built database systems handling 5,000+ monthly transactions

PROJECTS

DermaOS — AI Skin Analysis & Marketplace (live)

- Shipped the consumer AI loop: photo + questionnaire in → multimodal (GPT-4o-mini) analysis scoring 6 skin metrics with a 4-week forecast dashboard → RAG-matched product routine over 1,300+ items with personalized grades → downloadable PDF report with routines, diet, and lifestyle advice.
- Built the monetization: freemium scan credits, Google OAuth, Razorpay subscriptions + one-time purchases, INR/USD regional auto-detection — live at dermaos.vercel.app.
- Tech: Next.js 16, Supabase, Prisma, OpenRouter, Razorpay — github.com/Aryan-Protein-Vala/DermaOS

MYLO OS — Desktop AI Operator (live product + pricing)

- Shipped the product around a radical idea — an AI that sees your screen and does the work: transparent overlay UI above any app, voice-triggered tasks executed by a ghost cursor, background agents that ping when done, and OS-level stealth for private work sessions; mylo-frontend.vercel.app carries the marketing, pricing, privacy, and ToS surfaces.
- Designed 3-tier monetization (BYOK Free / \$14.99 Pro with Cortex memory / \$49.99 Elite with background agents) — the pricing that matches feature cost to perceived value.
- Tech: Rust, Tauri 2, Cloudflare Workers, Next.js — github.com/Aryan-Protein-Vala/MyloOS · mylo-frontend.vercel.app

V■YU — Voice AI Answer Product

- Shipped a voice-first Q&A product where the latency budget IS the product: 0.8 ms P50 answers, live partial transcripts while you speak, engine attribution in the answer meta (SARVAM VOICE vs BROWSER VOICE), and graceful offline/browser fallbacks — the trust details that make voice feel credible.
- Tech: Next.js 16, FastAPI, Sarvam AI, Groq — github.com/Aryan-Protein-Vala/vayu-voice-rag

ResumeAura — AI Resume Rating (product for job seekers)

- Built the product thesis into software: rates resumes the way a recruiter sees them — AI vision pass scoring visual hierarchy, project depth, impact, and target-company readiness (MAANG / startup / quant) — with a visual heatmap of weak spots and prioritized fixes; containerized Rust engine + Next.js UI.
- Tech: Rust, Docker, Next.js, AI Vision — github.com/Aryan-Protein-Vala/ResumeAura

CommentLysis — Creator Intelligence Platform

- Shipped creator-facing AI: comment sections → sentiment dashboard, top-questions list, and viral video ideas grounded in actual viewer feedback; 3 PDF report types as the shareable deliverable; Chrome extension as the acquisition surface (analyze while you browse).
- Tech: Next.js 15, Firebase, GPT-4o, Chrome Extension — github.com/Aryan-Protein-Vala/CommentLysis

CERTIFICATIONS

- Frontend Development Certification — Sheryians Coding School
- Data Science & AI/ML Bootcamp Certification — Udemy
